## Incorporation

This additive may be incorporated into the paint by two alternative methods, depending upon the requirements of the end application. Direct incorporation provides for a more even appearance on large areas, whereas hand broadcast may be preferred for smaller sections such as the tread surface of steps.

- Direct incorporation method

Bradite Low Slip Aggregate SA14 should be added to the paint and mixed thoroughly just before use at a rate of 1 x 250ml SA14 tin (375g) per 5 litre of paint.

- Hand broadcast method

Bradite Low Slip Aggregate SA14 should be scattered over the first coat while it is still wet at a rate of 0.5 - 1.0 kg/m<sup>2</sup>. When dry, excess low slip additive should be brushed off before application of the final coat.

The end user and applicator must ensure that the finished floor is safe against slips in all likely usage conditions.
